Session Persistence Server, Powered by Wavelink

Whether your business is in the factory, warehouse, or retail, you have no time for downtime. Any time that's lost when workers can't complete tasks can impact your bottom line. And when the issue is as simple as network connectivity at the worker's location, it's incredibly frustrating.

Work happens everywhere in your environment. Don't let a weak network-connection signal in that corner of the distribution center or on the fringe of the retail floor slow workers down. With Ivanti® Session Persistence Sever, your workers—and their task workflows—are protected against data loss.

Session Persistence

Eliminate lost data caused by dropped connections or if the device goes into "sleep" mode. Our Session Persistence Server maintains the session so workers don't have to repeat tasks.

Made for Real-world Mobility

Workers travel out of network range. Devices require reboots. Batteries need to be swapped. Reconnect seamlessly to the host and existing sessions, resuming from the last application state.

Failover Protection

Eliminate single-point-of-failure risk. Session Persistence Server lets you set up multiple connections—creating enterprise-application redundancy and business peace of mind.

Secure Connectivity

Enterprise-grade security is built in using SSL/TLS encryption from the client and SSH to the host. Administrators can also create custom security parameters to fit your unique business requirements.

Powerful Administrator Features

See device connections, connection duration, last activity time, numerous network connection details, and more. Admins can also capture and log telnet traffic, connection aborts and timeouts, retries, and even the total number of bytes sent and received by a single proxy service.

Trusted Connectivity for Telnet Clients

Our Session Persistence Server has been keeping Terminal Emulation users connected and productive for three decades, on more than 10 million devices, across multiple mobile operating systems.

Ready for Your Android Deployment

As you move to the latest devices, we're with you. Get the same secure, persistent connections for your Ivanti® Velocity applications.

Stay Connected

Add our Session Persistence Server to your telnet deployments today.
