ENTERPRISE MOBILITY MANAGEMENT

MobiControl for Android®

Overview

Because of its open origins, Android was once perceived as less secure than other mobile operating systems. However, this is no longer true; increasing adoption in the enterprise is driving Android's leadership of the global smartphone and tablet market share. SOTI MobiControl makes it simple, quick, and safe to manage a variety of devices running Android. Both BYOD and corporately owned Android devices are secured, tracked, configured, and supported over the air with a single solution. With SOTI, Android is ready for the enterprise.

Android+ Technology

SOTI's Android+ technology was the first to address Android device management fragmentation. SOTI collaborated with key OEM manufacturers to harmonize the security and management features across their devices. Even with other Android management API's available in the marketplace, there are still device manufacturer's and Android OS versions that rely on Android+ to extend device management capabilities.

Android for Work

Android for Work (AfW) is Google's mobility management platform that enables the development of managed, secure business applications. Android for Work powered by SOTI provides a dedicated workspace with full OS-level encryption to securely separate business and personal data and applications on Android tablets and smartphones. SOTI's commitment to AfW guarantees the broadest feature set and future Android device compatibility.

The Preferred Choice of Android OEMs

Over 80 Android OEM partners have chosen SOTI for our advanced technology and mobility management expertise. We work very closely with the largest Android device manufacturers that currently dominate the market to drive toward MORE open standards and MORE common API's. SOTI's strong relationships with hardware OEM's and operating system companies make business mobility easier for our customers.

SOTI Device Certification Program

Upon request, SOTI works with hardware OEM's to validate core EMM functionality and verify device compatibility with SOTI MobiControl. This same service is available to you to make sure that your chosen mobile devices will perform as expected; no bugs, no surprises, and no problems.

SOTI MobiControl Android Features and Benefits

Fast Track your Android Deployment

Getting your mobile enterprise running on Android has never been this easy.

- Deploy Android devices with no complex configuration or implementation required.
- Silently provision corporate email, contacts, calendar, apps and security policies over-the-air without user intervention.
- Control key device features remotely; Camera, App Store, WiFi, Bluetooth, and NFC.

Whether you are deploying corporate-liable or BYOD Android devices, SOTI enables IT administrators to activate Android devices in seconds so employees can get to work faster than ever before.

Guarantee Security and Privacy

Deliver industry leading security to all of your Android mobile devices and endpoints.

- Remote device attestation establishes the 'trustworthiness' of a device before enrollment
- Enforce strong passwords & data encryption, manage certificates and corporate/application sandboxing
- Automatically scan for viruses and malware and enable real-time remediation.

SOTI lets you manage the secure Work Profile on the employee's Android device without compromising the privacy of the end user.

Manage Applications and Content

Give your mobile workers the tools they need to do their job, anywhere and anytime

- Deploy enterprise applications securely through a private Application Catalog
- Provide a curated app experience on Google Play to keep personal apps separate.
- SOTI hub and Secure Content Library publish and control, and track access to corporate files and documents.

SOTI manages the enterprise and open market applications available to your workers on their Android devices.

Advanced Features

Give your IT Department the tools they need to manage the company's mobile devices.

- Remotely support mobile users by viewing and controlling devices over the air and manipulating their device files directly.
- Location Services allow you to track and report on devices globally and send alerts or modify device behavior based on location.
- Manage telecom expenses for each user, send alerts or shutdown features when thresholds are exceeded.

SOTI delivers advanced Android device features to increase worker productivity and decrease costs.
